

SMARTi Dynamic Forms Designer

Automatically transform and enhance computer output reports

SMARTi Dynamic Forms Designer allows you to easily transform and enhance the presentation of your text and data. With the implementation of an interactive GUI, you can speed up the design of new forms, emulate and thus replace pre-printed forms, and enhance report output from just about any source. Legacy reports from Unix, Linux, Aix, AS/400, OS/390, OPENVMS, HP3000 and others can be reformatted in a matter of minutes for a fresh modern appearance.

Mapping information to your new form is made easy by incorporating a drag and drop function that keeps track of your line & column source locations. Results are immediately available and viewable to aid in the design process.

Flexible Functionality

- ✓ GUI based design environment
- ✓ Drag and Drop Text boxes for both dynamic and static text & data placement of all elements
- ✓ Selectable line weights, shading, borders, area fills, and colors
- ✓ Select from any true-type font and size
- ✓ Add color, stripes, and shading to traditional greenbar and greybar background for increased readability
- ✓ Color jpg, tiff, gif, bmp, png image import
- ✓ Text boxes for both dynamic and static text & data objects
- ✓ Variable opacity of all elements and backgrounds
- ✓ Dynamically include multiple images on a page
- ✓ Automatic dynamic text and forms merge
- ✓ Design elements include rectangles, ellipses, lines, and picture objects
- ✓ Determine paper orientation & size, landscape and portrait
- ✓ Dynamic line and character position indicator
- ✓ Immediate visual results - Replace greenbar electronically
- ✓ Add barcodes
- ✓ Add bookmarks
- ✓ Add hyperlinks
- ✓ Automatic report bursting

Static Elements

Static elements such as lines, rectangles, ellipses, boxes, images, and constants can be placed anywhere on your user defined forms template - 8 ½ x 11, A4, legal, and custom sizes are supported.

All form elements can be further refined through the interactive on screen edit window to provide precise placement, font selection and size, element widths and lengths, colors, borders, and object fills.

Dynamic Text

Dynamic text, whether it be a single character or a whole page, is user selected and mapped to the forms template with a simple drag and drop function. **SMARTi Dynamic Forms Designer** will seamlessly integrate the dynamic data with the template.

As with static elements, dynamic text can also be precisely placed on the form and further enhanced with background fills; text box border type, color, font selection and size through the on screen edit menus.

- ✓ Insert Images
- ✓ Design Elements such as circles & squares
- ✓ Opaque Background
- ✓ Drag 'n' Drop Dynamic Text
- ✓ Create Static Text
